

LiliF® Avine Influeza virus common Ag rapid test kit

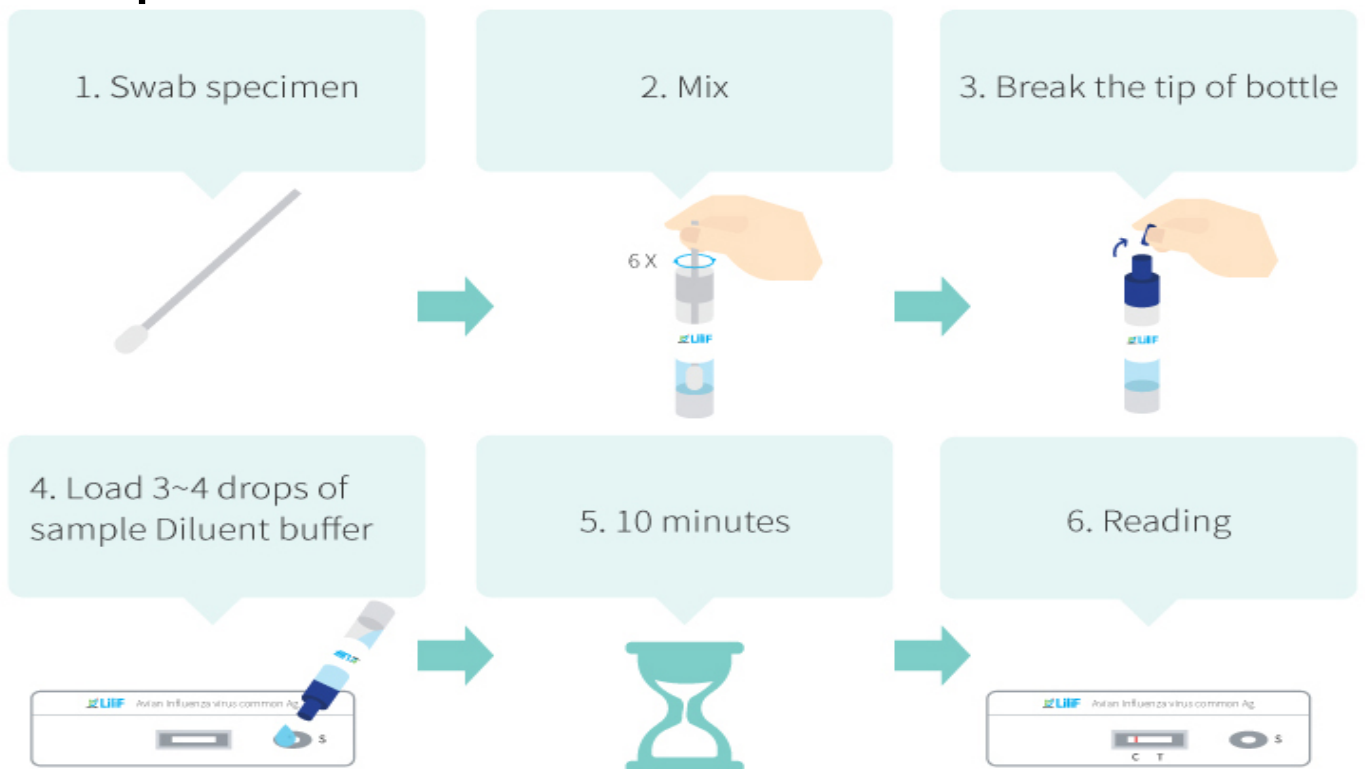

Cat.No	Capacity
INT-IR0341283	1 test X 10 / kit

Avian influenza—known informally as avian flu or bird flu is a variety of influenza caused by viruses adapted to birds. The type with the greatest risk is highly pathogenic avian influenza (HPAI). Avian influenza, for most purposes, refers to the influenza A virus. Avian influenza strains are divided into two types based on their pathogenicity: high pathogenicity (HP) or low pathogenicity (LP). The most well-known HPAI strain, H5N1, appeared in China in 1996, and also has low pathogenic strains found in North America. Companion birds in captivity are unlikely to contract the virus and there has been no report of a companion bird with avian influenza since 2003. Pigeons do not contract or spread the virus.

LiliF™ AIV common Ag Rapid kit is a Lateral Flow Immuno-Chromatographic Assay kit for the rapid and accurate qualitative detection of common Ag, nucleoproteins of Avian Influenza Viruses in avian cloaca, trachea, or feces swabs.
